Projects

Netflix Clone	Github	Live
----------------------	------------------------	----------------------

- Developed a full-stack Netflix clone using React, Tailwind CSS, Zustand, Node.js, Express.js, and MongoDB, delivering a smooth and intuitive user experience.
- Built a robust movie browsing and search functionality, allowing users to explore content efficiently.
- Designed a responsive, high-performance UI, integrating React Router for navigation, Axios for API calls, and React Player for media playback.

Real-Time Chat Application	Github	Live
-----------------------------------	------------------------	----------------------

- Full-stack chat application using modern web technologies,integrating Express js and MongoDB on the backend and leveraging React,Vite and Tailwind Css on the frontend.
- Utilized Zustand for state management, improving performance and scalability while maintaining a smooth user experience. Integrated Socket.io for real-time messaging, ensuring instant message delivery and live updates
- Messages persist for both the sender and receiver.

E-Commerce Website	Github	Live
---------------------------	------------------------	----------------------

- This is an e-commerce platform that sells products in three categories: children, men, and women. Implemented functionality to view detailed information for each product.
- Designed RESTful APIs to support user registration, product management, and cart functionalities, optimizing backend efficiency.
- Built an admin dashboard with product management capabilities, image uploads (Multer), and access control, enabling admins to manage the platform effortlessly.

Password Update/Reset	Github
------------------------------	------------------------

- I am showcasing my skill stack by building a web app with login/logout functionality, allowing users to reset their passwords
- To reset or update the password, the system sends a six-digit OTP to the user's email.
